

PROJECT REPORT

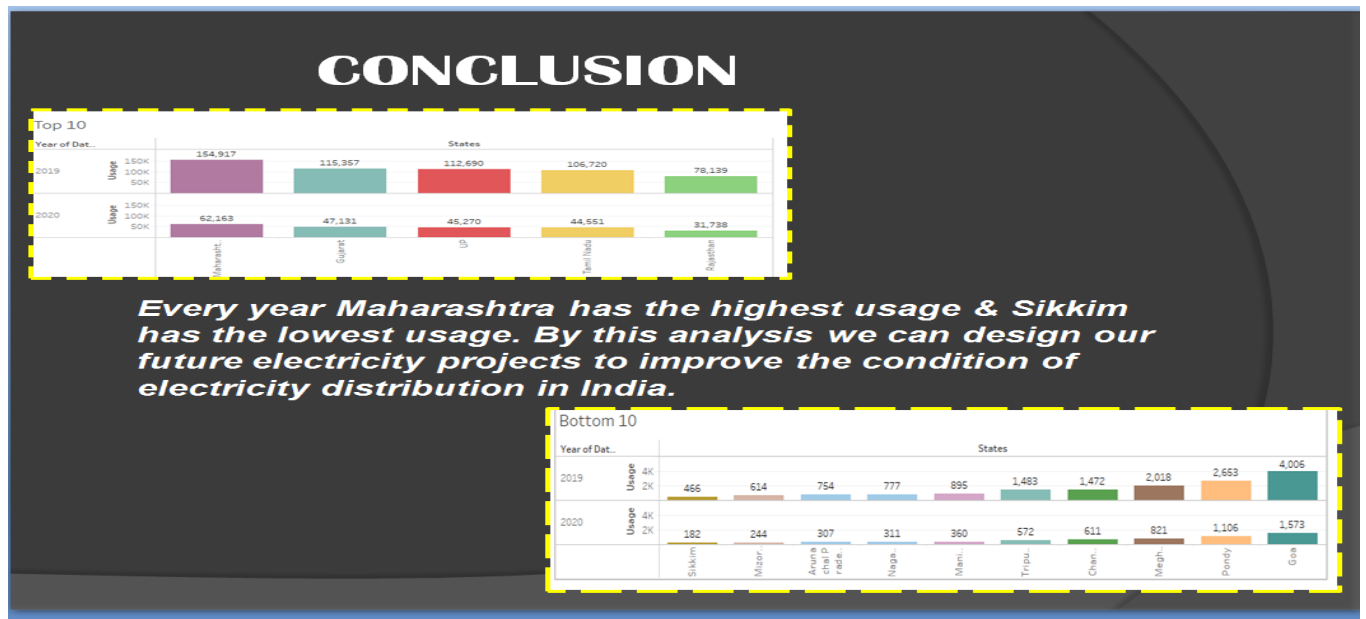

1. Introduction

- 1.1 This is a data analysis project about electricity consumption of India of year 2019 & 2020.
- 1.2 The purpose of this project to know the electricity consumption so the future planning can be done.

2. Problem defining

In this project we find the that where how much electricity is consumed.

3. Result

4. Advantages & Disadvantages

By this report we can design future developments in sustainable manner.

5. Applications.

This solution is applied in future developments plans.

6. Conclusion.

Every year Maharashtra has the highest usage & Sikkim has the lowest usage. By this analysis we can design our future electricity projects to improve the condition of electricity distribution in India.

7. Future scope

This solution is applied in future developments plans.
